

If the discovery process involves Lotus Notes, get us involved.

Lotus Notes is complicated. Choosing experts to help you make sense of it isn't.

In today's digital world, a significant percentage of the discovery materials lawyers are called upon to produce is in the form of electronic data.

Sometimes producing that data is simple. Sometimes it's not, especially when Lotus Notes is involved

IBM Lotus Domino server software combines enterprise-class messaging and calendar/scheduling capabilities with a robust platform for collaborative applications on a wide range of operating systems

It's sophisticated, complicated software that must be handled and analyzed with extreme care by experts who know it inside-out in order to achieve the results you want.

When it comes to litigation support, **LWINET** is the Lotus Notes expert.

Founded by a former IBM software engineer with more than 30 years of IT experience, LWINET has earned a reputation as the "go-to" company lawyers call first when they are involved in litigation that includes Lotus Notes data.

Providing support to lawyers who need to produce or locate Lotus Notes data of any type – text files, emails, spreadsheet documents, databases or images – is our primary business.

The process and services we offer.

There is no such thing as a standard engagement. Each is one-of-a kind. We can deliver as much, or as little, as you require of us, quickly and cost-effectively.

We will work with you, your forensic investigators and/or your IT consultants every step of the way, helping identify, collect, produce and analyze the data, and present the results in plain English, so you can spend your time determining how to best put that data to use.

Discovery support and hosting services:

- De-dupe processing
- Data culling
- Examining email databases
- Examining non email Domino/Lotus Notes databases
- Preserving data integrity
- Native production and data imaging

Support for multiple types of email systems and files:

- Lotus Smartsuite 9.5, 9.6, 9.7+ (all applications)
- Outlook
- Groupwise
- Microsoft Office 2000, XP, 2003+ (all applications including Visio)

Output delivery in the format you choose:

- tif
- ps
- txt
- pdf
- bmp

Reading and delivering multiple media formats:

- CD-R/RW, DVD-R/RW, DVD+R/RW (double layer), DVD-RAM
- Zip disk, floppy disk
- LTO Ultrium 1 tape, LTO Ultrium 2 tape, 8 mm DAT cartridge
- External HDD (USB or Firewire)
- FAT32 or NTFS-formatted IDE or SCSI drives

Our principals.

Constance Loving: Coni has been in the IT industry for more than 30 years. She worked at IBM, where she was a member of IBM's original Cleanroom Software Engineering Methodology team directed by Dr. Harlan G. Mills. The group is famous for developing a software engineering methodology that enables determination of "mean time to failure." Ms. Loving has also contributed to university textbooks in programming and information systems design and has taught Lotus Domino/Notes System Administration and Application Development courses.

Todd Simonson: Todd is LWINET's "GUI guy." He has a keen awareness of client needs and is able to present technical concepts in layman's terminology. In addition to being a user interface expert, Todd also has expertise testing accessibility characteristics of software applications and working with law firms to identify forensic evidence in Lotus Notes databases.
